

## ALBATROS

### ROTATION STAGES ARS 65 & ARS 80

The rotational stages ARS 65 and ARS 80 are suited for simple positioning of samples and test pieces. Both stages are manually driven by a screw worm-gear and a turning knob with a 100 scale line. They can be mounted in combination of the ALBATROS system as well as within optomechanical construction systems of other manufacturers by two M4 screws with 25 or 34 mm hole distance.
